Experience

EDUBOT Software and Services June 2025 – July 2025

Data Engineering Intern

- Designed and deployed a scalable cloud-native ETL pipeline on Azure (Blob Storage → Data Factory → SQL Database), automating end-to-end FMCG sales data flow and reducing manual data handling to zero.
- Cleaned and transformed raw supply chain data using Pandas and NumPy, engineering business-ready features like adjusted revenue and demand indicators, boosting data reliability by 30%.
- Built Power BI dashboards delivering real-time supply chain insights across regions, product categories, and store types, cutting reporting time by 40%.

Projects

FinServe – Cloud-Native Loan Origination & Credit Scoring Portal GitHub

- Designed a serverless AWS loan-origination platform on a VPC-isolated architecture (7 Lambda functions, API Gateway, DynamoDB, S3, Cognito) cutting loan decision time from 5–10 days to 15 minutes for NBFC applicants.
- Automated document verification using AWS Textract with presigned S3 URLs for direct browser-to-cloud uploads, and implemented group-based (applicant/loan-officer/admin) authorization via Cognito JWT.
- Built tamper-proof audit logging with DynamoDB IAM deny-on-delete policies and CloudTrail log-file validation to meet NBFC regulatory compliance requirements.
- *Tech: Next.js, TypeScript, AWS Lambda, API Gateway, DynamoDB, Cognito, S3, CloudFront*

Cognita – AI-Driven Classroom Collaboration & Intelligence Platform GitHub

- Architected a full-stack MERN + TypeScript classroom platform with role-based access for Teachers, Students, and Admins, integrating JWT and Google OAuth authentication with real-time WebSocket communication via Socket.io.
- Built an Analytics Intelligence Engine that computes composite student risk scores from academic performance, submission timeliness, and forum engagement, with automated declining-trend detection to proactively flag at-risk students.
- Developed an AI-powered peer mentoring system using round-robin matching to connect students, alongside a nested, infinite-depth doubt discussion forum with teacher endorsements and real-time synchronization.
- Engineered end-to-end assignment management (auto-expiry, late-submission tracking, live submission/grade analytics) and an optimistic-UI notification system with background sync for instant updates.
- *Tech: React, TypeScript, Node.js, Express, MongoDB, Socket.io*

PathFinder – AI-Based Career Path Recommendation System GitHub

- Built a full-stack AI-driven career exploration platform delivering personalized career recommendations and adaptive learning roadmaps based on user education, skills, and interests.
- Designed a resilient multi-provider AI orchestration engine (Gemini → Groq → OpenRouter fallback chain) with circuit breakers, rate limiting, and LRU caching for high availability.
- Developed a weighted recommendation algorithm matching users to career paths, paired with a side-by-side career comparison tool.
- *Tech: Next.js, TypeScript, MongoDB, Gemini API*

Skills

Languages: JavaScript, TypeScript, C++, Java, Python, SQL, PHP
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs
Databases: MongoDB, MySQL, PostgreSQL
Data Engineering & Cloud: AWS, Azure, ETL/ELT Pipelines, Power BI, Pandas, NumPy
Tools: Git, GitHub, VS Code

Education

SRM University 2023 – 2027

B.Tech in Computer Science — GPA: 8.99

FIITJEE 2021 – 2023

Intermediate — 96.4%

Certifications

Oracle Certified: Java SE 17 Developer
AWS Certified Cloud Practitioner
Google AI Essentials
